Summary

Computer Science undergraduate at UP Manila with proven technical execution across peer-reviewed AI research, enterprise data systems, and competitive engineering. Placed 1st Nationally at L'Oréal Brandstorm 2026 (Global Finalist, top 0.035% worldwide), and Grand Winner at the Naga City Mayoral Hackathon. Author of a published paper in IEEE IISA 2026 on explainable ML for genomics. A high-agency builder passionate about shipping tools and practical intelligence that solve tangible everyday problems.

Education

University of the Philippines Manila, BS in Computer Science - Manila, NCR — Expected 2026
- **Relevant Coursework:** Software Engineering, Web Programming, Database Systems, Computer Architecture
- **Activities:** UP Society of Computer Scientists, Google Developer Groups on Campus UP Manila

Chonnam National University, MOVE-UP Outbound Student Exchange - South Korea — June 2024
- **Relevant Coursework:** Principles of Programming Languages, Design Engineering, Human-Computer Interaction
- **Activities:** Engaged in international exchange programs and university global initiatives

New Era University, STEM Strand - Quezon City, NCR (Graduated with honors) — Aug 2021

Experience

Affiliate Data Intern - CPD CDMO, L'Oréal Philippines - Mandaluyong City — May 2026 – Aug 2026
- Ingested and consolidated **multi-channel sales and marketing datasets** for 4 major brand portfolios (L'Oréal Paris, Maybelline New York, Garnier, and Dr. G) using **Power Query** and **Power BI**
- Engineered **automated ETL pipelines** and **predictive data projection models** using **Power Automate** and **Advanced Excel (VBA)** to optimize marketing budget allocation

IT Service Management Intern, DFI Retail Groups - Mandaluyong City — June 2025 – Dec 2025
- Developed and maintained enterprise software applications adhering to rigorous **SDLC** and security standards
- Ensured solutions satisfied stringent functional requirements across **system performance** and **data security**
- Planned, managed, and executed **software deployments** across **development, staging, and production** environments

Contributor - Generalist (Tier 1), Outlier - Remote — Aug 2024 – Dec 2025
- Ranked and evaluated **100+** AI-generated responses to diverse prompts, ensuring alignment with human preferences
- Conducted fact-checking verification of model outputs to diagnose and mitigate system hallucinations

Projects

L'Oréal Brandstorm 2026 - National Champions (Philippines) — 2026
- Designed digital-physical fragrance ecosystem securing **1st Place Nationally**; flew to Paris to represent the country at the Global Finals (Top 135 of 380k+ international competitors)
- Built conversational scent discovery engine with real-time voice synthesis and persistent user profiles
- **Technologies Used:** React, TypeScript, Node.js, Groq, Mistral AI (Voxtral TTS), Tailwind CSS

MyNaga Health Suite: Health Governance - Naga City Mayoral Hackathon — 2026
- Spearheaded full-stack architecture, securing **Grand Winner (Health)** at the 1st Naga City Hackathon for 155k+ residents
- Engineered 3-pronged platform (**smart triage, voice-to-form, guardian mode**) reducing clinic wait times 3–5x
- **Technologies Used:** React, Node.js, HuggingFace, Groq, Netlify, PWA, RESTful APIs

Decoding SLE: Pathway-Grouped Explainable ML for Lupus Risk Prediction — 2026
- Engineered genomic explainability framework using XGBoost and TreeSHAP, achieving test AUC-ROC of **0.812**
- Published as Full Paper in **IEEE IISA 2026**; aggregated variant SHAP values to rank top driving immune pathways
- **Technologies Used:** Python, XGBoost, TreeSHAP, Scikit-learn, GWAS APIs, Biopython

AlarmZone: Mission-Based Smartwatch App (Zepp OS) — 2026
- Engineered mission-based smartwatch app on Zepp OS (TypeScript) across display form factors with accelerometer sensors
- Published across **106 countries** (1,800+ downloads), driving a **78.8% checkout rate** and **+160% QoQ sales growth**
- **Technologies Used:** Zepp OS (QuickJS), TypeScript, Jest, KiezelPay Payment Gateway, ASO

ClaimCheck: Multimodal GEO & Explainable AI (XAI) Attribution Engine — 2026
- Designed multi-agent VLM pipeline mitigating hallucinations; elevated citation support from **47.2% to 86.3%** (InternVL2)
- Audited attention maps via **Grad-CAM**; derived formal Attribution Grounding Scores over cross-attention layers
- **Technologies Used:** Python, PyTorch, Grad-CAM, InternVL2, Qwen2-VL, LLM-as-Judge

Technical Skills

Programming Languages: TypeScript, JavaScript, Python, Dart, C, C++, Java, PHP, HTML, CSS, SQL, Bash
Frontend Development: React, Next.js, Vue.js, Vite, Tailwind CSS, HTML5, CSS3, Responsive Design
Mobile Development: Flutter, Dart, Android Studio, Cross-Platform Architecture, Wearable Sensors
Backend & APIs: Node.js, Express.js, FastAPI, Laravel, RESTful APIs, WebSockets, JWT Authentication
AI & Machine Learning: PyTorch, TensorFlow, HuggingFace, Transformers, Autonomous Agents, Prompt Engineering, RAG
Cloud & DevOps: Docker, Kubernetes, Cloudflare Workers, Netlify, Vercel, CI/CD, Git, GitHub
Databases & Storage: PostgreSQL, MySQL, Supabase, Firebase, Prisma, Vector Databases (ChromaDB)
Developer Tools & Practices: VS Code, Postman, Jest, Vitest, Linux/Bash, ESLint, Prettier, npm, Agile/Scrum
